23rd January, 1964.

L. Rowell, Esq.,
P.O. Box 6500,
MONTREAL.

Dear Lorne,

Thank you very much for your most interesting letter of January 13th enclosing two copies each of your Reports 3 and 3A, and with your answers to the comments raised by R. & D.E. I see that you have sent two copies to Dr. Green and I am expecting him to comment to you directly if he has anything more to add.

I shall be in Montreal towards the end of February and I look forward to seeing you again and discussing these problems further. You have given us a lot to think about and I should be most grateful if you could please arrange for me to have five more copies of the report and the graphs, which I would like for Mr. Procter in Engineering Department, and for our friends at Bristol and in Germany, Australia and South Africa. My spare copy I have given to Mr. Haines, who is sharing it with Production Department, and I shall be sharing my own copy with Engineering Department until a copy comes for them.

I am indeed glad that you feel able to write so freely to us. We certainly look forward to your letters and reports and are never disappointed. This is the standard I like to see for communications within the Group Research. As you say, this should be a most interesting year for our industry, and certainly there has never been a greater challenge.

kindest regards,
 Yours sincerely,
