

Note for Mr A. L. Heard.

Research Conference Canada - August 1982

It is conceivable that you might get U.S. objections to the use of "humans in biological testing" - see revisions to biological programme. However, as all such work will be carried out under contract ^(potentially damaging) any interpretation will be solely that of any medical authorities associated with the work.

As with some of CIA's recent suggestions we should know about the effects of cigarette smoke ^{as early as possible} and it won't all be good news.

Hopefully the subject won't get raised but this is just in case it does.
