

Extract from TSRT minutes of meeting 10th November 1989

25. Reviewing the proposed programme of Fundamental Research, Mr. Heard said that 57% of the expenditure was on projects related to regulatory issues and 43% on developments aimed at providing the basis for new products.

The team supported the programme and also the proposed allocation of the charges, both for the programme and for the funding for the Scientific Research Group projects (external projects in the area of smoking issues).

However, it was suggested that following the discussions at the meeting, the work on ETS and on extrusion should be subject to further review to determine whether it might be appropriate to apply a lower priority to these projects.
