12th June 1989

Tobacco Chemists' Research Conference, 1989

About a month ago I asked for comments on the abstract to a paper entitled :

"Studies of the Elution of Nicotine from Tobacco at Room Temperature"

It was proposed that Kevin McAdam should present this paper at this year's TCRC in October.

The view was expressed that, as elution is central to Project NOVA, the subject may have important commercial applications. Consequently this paper will not be presented at the TCRC.

Project NOVA is the background research on alternative products which will be conducted at Southampton. Final details of the work programme for the project will be sent to you in the near future.

With best wishes,

RRB.
R.R. BAKER

cc: Mr. K.G. McAdam
