inverell

Dear Tony,

Further to our telephone conversation today, I have set out below our smoke analytical results for 555 Filter Kings. These data are based on a 20 port smoke run.

	TAR (mg)	NIC. (mg)	CO (mg)	PN
ITL Analysis	16.2	1.46	16.5	9.3
BAT Analysis (August)	16.1	1.35	16.1	9.0

As you can see there is good agreement between our analysis and that conducted in Southampton. I would suggest that the following numbers should be printed on the pack.

Tar	16 mg
Nic.	1.4 mg
CO	16 mg

400327263

- 3 -

When the brand is available in Canada we will include the smoke delivery data in the ITL quarterly "Toxic Substances Report" to Health and Welfare. As we discussed, the data will be based on that generated in Southampton and you will arrange to have this sent to me on a quarterly basis.

With best regards,
Yours sincerely,

S.R. Massey
