Netherlands

Dear Mr Scheffers

REPORT 20.2192

With the current interest in slim cigarettes, the above report examines the effect of circumference changes (13 to 29mm) on nitrosamine deliveries. It shows that in general, mainstream nitrosamine deliveries reduced with decreasing circumferences. However, not all of the reductions are proportional to the weight of tobacco burned.

Would you kindly confirm receipt by returning the copy acknowledgement slip which is attached to the report.

With kind regards,

Yours sincerely,

TAJ HIRJI
