England

Dear Alan:

My young son Kevin sent me the attached paper on "Cascade Particle Analyzer," which he got from the author, Dr. F.W. Karasek, who specializes in laboratory instrumentation at U. of Waterloo. Evidently Karasek, simply as a means of exploring the potential of the particle analyzer, used it to measure cigarette smoke aerosol particle sizes, and then went on to explore analysis of collected particles. Karasek told Kevin he was greatly surprised by the substances he identified, and wrote "the Camel company" asking for verification that such substances indeed were in Camel's smoke. Needless to say he didn't get it.

Most likely this instrument is old hat to your aerosol experts, but the word "terpenoid" as a constituent of Camel smoke leapt from the page.

With kind regards.

Yours sincerely,

*R.M. Gibb*
