

Northrup's Report T20 / 1969

1. Dick Nichols said this report would be emerging, + its purpose was to review the merits of the routine assays of tobacco residue carried on in Sydney, W.B.F. wanted to cut back on unnecessary data production to give space + effort for other work. Northrup does not tackle the smoke + policy.

2. This is a re-hash of old information, but does not attempt a critique of approaches, i.e. it states "what we do" rather than "what do we need" + "what should we do." The 'cigarette evaluation number' described in Appendix I is monument to muddled thinking + amateurism.
