9th June, 1980

National Adhesive 68-4108  
AGP 80/5

This is a side seam adhesive of interest to Canada for application to highly porous paper.

National stated that all ingredients were AGP approved (1976) except for VAE emulsion. On the grounds that the latter is already on the 'approved' list of other manufacturers, I agreed its clearance with Canada subject to formal approval at the next AGP meeting. You have since agreed to VAE on the new National list (80/13).
