PRW/CMW  
30th January, 1980.

Mr. T. Mitchell,  
R & D Department,  
British American Tobacco,  
Millbrook,  
Southampton,  
Hampshire.

Dear Mr. Mitchell,

Further to my telephone call last week I have now obtained the address and contact in Canada. This is as follows:-

Mr. D.E. Shroeder,  
Manager Technical Service,  
Imperial Tobacco Ltd.,  
3810 St. Antoine Street,  
Montreal,  
Quebec,  
Canada.  
H4C 1B5.

The adhesive reference number is National 68-4108 supplied by Nacan of Boucherville. The formulation consists of a vinyl acetate ethylene copolymer at a viscosity to suit the application equipment. Its use is cigarette side seams on particularly porous paper.

Apparently cigarettes made with National 68-4108 have passed Imperial's Smoke Panel Test but your written approval is urgently required before full machine trials can go ahead.

Mr. T. Mitchell,  
British American Tobacco.

30th January, 1980.

On the separate sheet attached I have attempted to up-date the 1976 list of accepted ingredients. Essentially the list is very similar although I have tried to include as many "likely" raw materials as possible.

It is difficult to anticipate future needs and therefore materials that we may have to move to in order to keep up to date with the rapid developments that occur in the cigarette market. I hope therefore that you have no objection to me telephoning you as urgent problems arise.

Very many thanks for the help that you have given us and in anticipation of your letter to Canada.

Yours sincerely,

P.R. Wethered  
Technical Service Supervisor
