Dear Bob,

During my recent visit to I.T.L., interest was expressed in our intentions regarding Project PREFAB. In particular, Wayne Knox and Bill Saunders requested a copy of the note which describes the final design. This I have enclosed and would be most grateful if you would circulate/copy them with it. Any comments which you or they have on this work will be gratefully received.

I wonder, also, if you have yet defined a role for the DELTA technique within the I.T.L. context. We are anxious to promote its consideration throughout the group and would welcome any observations which you might care to make on its potential application in Canada.

With best wishes.

Yours sincerely,

*M.O.*
