| REF | IWH/JP/46C. | DATE | 21st June, 1968. |

Enclosed are four copies of Report No. RD.582-R, which describes our first attempt at a prototype filter tipped cigarette with hoped-for reduced biological activity. At the present time we have concluded that there is little to be gained from further work with tobacco. As you know, the proposals for chemical additives are already being examined in the Establishment, and Dr. Felton will be writing to Mr. Laporte to determine whether it is possible to have PCL made from the different tobaccos. As we accrue information in these two fields then we will be designing further prototype cigarettes.

I.W. Hughes
