

RD 573-R

TO: D. S. F. HOBSON, ESQ. FROM: S. J. GREEN.
SIR CHARLES ELLIS.

RD. 573-R covers the work done so far on ethylenediamine acetate. This looks particularly useful for the removal of formaldehyde in a wet filter construction but the material itself transfers to the smoker and biological testing will have to be done before we know whether this is even a starter.

S. J. GREEN.
