TO: D. S. F. HOBSON, ESQ.
SIR CHARLES ELLIS.
A. J. BROCK, ESQ.

FROM: S. J. GREEN.

Report RD. 532-R covers the effect of nitrate on greenhouse tobacco (air-cured variety) and the resultant smoke. It is shown that increase in nitrate level of nutrition reduced benzpyrene markedly among other effects. The effect is not due to increasing the nitrate content of the tobacco. This will be repeated on a flue-cured variety.
