

RESEARCH AND DEVELOPMENT ESTABLISHMENT

TO DR. S.J. GREEN,
RESEARCH & DEVELOPMENT,
MILLBANK.

FROM DR. I.W. HUGHES.

REF IWH/JP/62A.

DATE 1st March, 1967.

Enclosed are five copies of Report No. RD.463-R, which covers the second part (acrolein measurements) of the examination of Swiss samples containing individual humectants. The work has shown that glycerol produces somewhat more acrolein than either propylene or diethylene glycol, but it must be remembered that the conversion is extremely low.

On page 8 of the report, we have mentioned the Battelle ciliastasis results, but have not quoted the report, which is a B report issued by you. I have also included I.T.Co. on the circulation - is this correct?

I.W. Hughes
