T.A.H. SLACK, ESQ.

From: S.J. GREEN.

Our Report RD.939-R is not suitable for wide circulation but it is important. It underlines again that high nitrogen nutrition of tobacco leads to high nitrosamine in the smoke. (Nitrosamines are highly carcinogenic.) Gauloise cigarettes gave values rather higher than other cigarettes tested, though still in quantities measured in hundredths of a millionth gms. per cigarette.
