CANADA.

FOR FILING

Dear Bob,

I enclose a copy of my notes on a recent meeting of the CORESTA Smoke Study Group, which I attended.

I would welcome your thoughts on Section 4.1, which is concerned with methods for vapour phase components of smoke. When Joigny, who is Chairman of the task force, contact me, I will write to Montreal seeking information on methodology. In the meantime, I am more interested in your general reaction. Although the task force is not charged with producing recommended methods, I imagine that pressure will be brought to bear at the 1974 Montreux meeting to isolate recommended methods from the information which has been accumulated. Consequently, are you in favour in Montreal of CORESTA producing recommended methods, or would you prefer these to be postponed for as long as is possible?

With kind regards,

Yours sincerely,

C. I. Ayres.

c.c. Dr. S.J. Green.
