Letter from: Mr. N.M. McCarty,
20, Ashley Crescent,
Quinton,
Birmingham 32.

Dear Sir,

I am attempting to write an article containing some interesting facts about cigarettes. Could you possibly tell me, for instance;

1. The amount of tar left in the end of an average nub?
2. The amount of nicotine left in the same nub? And the amount absorbed by the body? How much nicotine is deadly?
3. The changes, if any, in the smoke that is inhaled?

If you could answer these and give any other facts and figures about cigarettes I would be very grateful.

Yours faithfully,

N.M. McCARTY
