Dear Siqueira

I have given some thought to the presentations to be made by Souza Cruz R&D scientists during the RPG team visit to Amorim. The opportunity should be taken to show the calibre of the scientists, and thus as many as possible should be involved, (On the other hand, I do not believe that a string of brief presentations would be appropriate). You should also show a spread of your R&D projects, selected for their interest/relevance to other companies.

I propose, for your consideration, the following talks:

SDE - production & isolation of flavours	R Pinto
Sugar Esters	M Campos
Reaction Flavours	
Isolation of Amarelhino & Canum Sugar Esters	Santiago/
Root technology including chemical v sensory effects and Ansiro Technology	A Augusto
Improvement of stem sensory character	J A Ntzke
Capricornio	Oliveira
Biological control of pests & diseases	Galena
Pesticide residues	
Progress with DEER	Gava

These are purely my suggestions. Please feel free to amend as you think fit and kindly let me have your final programme ahead of the RPG Meeting.

With kind regards

Yours sincerely

A L Heard
