Note for Mr. I.C. Brown

lar

TSRT Actions

Following our discussions on 29th June, will you please ensure that I receive a note on the following items by 20th August.

1. Y-1 Tobacco

I require a note on the influences and value of Y-1 as a constituent of cigarettes including the Product Development projects in which it is being tried (at least BAIZE and two versions of GREENDOT, one with ET and the other without).

2. FELT

A note is required clarifying the subjective including taste characteristics of FELT together with a statement of its applicability at different tar levels.

3. Ammonia for Virginia blends

A progress report on this topic will be top priority. You should cover the full matrix devised by Steve and Taj but also the "quick and dirty" trial we agreed based on a low delivery irritant Virginia brand with and without EMERGE.

4. LESS

A progress report on your project will be needed since all CACs will present their positions on Sidestream.
