SM 65 Cigarettes for Project JANUS

Further to our recent discussions, please can you make 10,000 cigarettes from SM 65. Paper and cigarette dimensions as in Cigarette E0 can be specified and there is the usual pressure drop limitation of a maximum value of 15 cm W.G.

You recently made a batch of SM 65 cigarettes for P.J.N. (Av. weight 0.93 g; pressure drop 12.5 cm W.G.) and, unless you have any ideas on cutting etc. which might lead to a marked improvement in quality, I would suggest a virtual duplicate of this batch would be ideal.

If it is possible, we would like to have these cigarettes available for shipment late in January.
