JANUS - Ciliartus

We are caught in a squeeze —

Kramer wants some samples to keep the work going. On the other hand, we need the results from the current experiments (repeat examination of C₃ & C₃-) before we can decide whether or not to change to a 35 ml puff.

Suggest, therefore, that I send him the samples

is the dual acetate/cabin

I think that the previous result is very interesting & worthwhile confirming on a 35 ml puff — even if we decide to stick with the lower puff volume in 1967

OK? Yes
