attentionn dr miedreich
from mr edwards of asl london

since your visit i have been checking the records f our cd mice and find that we are approx 12/14 generations from the original nucleus. therefore they are now a subline and there is bound to be some variation during experimentation. i am awaiting to hear from you whether sufficient stocks are available to set up a second breeding programme to meet your immediate requirements. if you feel this should be started bearing in mind our generation number please let me know and upon receipt of the new stock we will commence breeding straight away. i will communicate with you within next few days with further information. your change of delivery programme noted. forwarding samples prices etc of caging and racking within next few days.
