* The term drug includes all agents of drug administration, including administration, animal (food), insects, plants, minerals, and duration.

* Under this phase there are at least two possible systems for the test system can be performed respectively:

(1) A regulator, relatively "low" system consisting of different animal systems into which large number of agents are introduced and evaluation of safety is performed.

(2) A system of control of low toxicity substances to include the regulator reflecting actual use in practice of the respective agents, which are used.
