REPORT NO. RD.1809 RESTRICTED

"ANALYSIS OF MAINSTREAM AND SIDESTREAM  
VOLATILE NITROSAMINES BY GC-TEA"

Whilst it is well-known throughout the Group that we are working on nitrosamines, we have not given the overseas laboratories very much in the way of detail on how we undertake the measurements.

This report covers the gap and, whilst it is aimed primarily at the laboratories, I enclose a second copy for you in case you feel one or two people in Millbank might welcome a quick sight of the report.

*C.I. Ayres*
