REPORT NO. RD.1774

"MECHANISMS OF SMOKE FORMATION AND
DELIVERY"

As you know, Dick Baker's paper at the Tobacco Chemists' Research Conference was well received. He has written up the paper in a slightly expanded form for circulation within the BAT Group.

I enclose a single copy for your retention and, in due course, David Conway will be advising on the circulation over and above that of the overseas research laboratories.

The paper given at the TCRC is printed in full in Volume 6 of "Recent Advances in Tobacco Science". This volume was given to all delegates at the TCRC, but is not on general sale or distribution.

With a slight modification in format, the review would be suitable for publication in "Progress in Energy and Combustion Science". This journal publishes reviews on combustion and the editor has verbally expressed a strong indication that a review on tobacco combustion would be suitable for the journal. He was not aware work was done in this area. There would be no problems of copyright to "Recent Advances in Tobacco Science" provided an acknowledgement was given to the original article.

Do you agree that we can go ahead?
