RESTRICTED

Prioritization of other noxae on basis of TLV's

Further to our recent discussions I now enclose a second draft of a document which we will be circulating to members of the SRG in due course. At this stage the applications are illustrative rather than exhaustive, but in a later draft we hope to include a complete list and we may ask you for information on deliveries per puff.

Hopefully this will give you an idea of the direction in which we are going and implications in terms of specific components.
