Dear

Following what I think was generally agreed to be a successful Research Conference, I am now busy arranging for the roll-forward of the Three-Year Programme to cover 1983/5. As you will recall, when discussing the GR&DC Programme at the Conference I raised questions which we had concerning our work in the Secondary Manufacturing area, including Ventilation Technology, and our basic conclusions are summarised in sections 13-15 (pages 18-19) of the Minutes. Having given careful thought, I would now like to propose the following revision :

- ... (i) Create a new Work Area 13 entitled "Novel Cigarette-Making Technology", the basic aims of which are laid out in the attached document;
- (ii) Divide Work Area 15, which currently covers both Physical and Chemical Test Methods, such that:
  - (a) Work Area 14 is Physical Test Method Development & Process Control, the programme for which will emanate from the survey currently being carried out by Arnold Cronshaw, and
  - (b) Work Area 15 covers Chemical Test Method Development and Analytical Projects.

Dr. Blackman has approved this plan, and I would appreciate any comments which you may have as soon as possible, in order that I can continue the momentum of finalising the revised Programme.

With kind regards,

Yours sincerely,

Enc.
