L.G. Laporte, Esq.,
P.O. Box 6500,
MONTREAL.

Dear Leo,

I enclose herewith copies of our Report No. RD.180-F dealing with the release of nicotine from tobacco at temperatures above 100°C under conditions of steam and dry distillation. This is part of our programme in which we are investigating the precise mechanism of release of nicotine from tobacco in an attempt to define the portion of the combustion zone which is responsible for this. This research is continuing.

Kindest regards,

Yours sincerely,

D. G. FELTON
