Dear Bob,

I enclose a copy of our chloride and potassium results of the Ogg test. We would be most interested to see how your results have come out. You will notice that in the letter to Dr. Ogg we have compared his method with our modification which is merely a smaller sample of tobacco and more dilute silver nitrate. The agreement between the results suggests that the method can be made to approach a semi-micro technique.

With best wishes.

Yours sincerely,

IWH

I. W. Hughes
