Mr. L. C. Laporte,  
P.O. Box 6500,  
MONTREAL 30.

Dear Mr Laporte,

I am sending you our Report No. PD.177-R on the effect of cuts on the physical properties of smoke.

The information in this field was contradictory but you will note that we have now resolved this and find that with increasing number of cuts per inch the tar yield from cigarettes remains unchanged, but that the nicotine yield is reduced.

With kind regards,

Yours sincerely,

Encls: 3
