Montreal,  
Canada.

Dear John,

During our visit you discussed with Miss Ivinson and myself the divergence you were finding between the nicotine results when assaying the smoke from five cigarettes and a one cigarette aliquot.

We had not noticed such a trend in our work but to be completely sure Miss Ivinson has carried out a check test. The results are recorded in a file note, a copy of which I enclose for your information. Briefly we cannot find a significant difference between the two techniques.

With kind regards,

~~XXXXXXXXXX~~
