Dear Andrew,

A short note to update you on the experiments with the cigarettes you recently sent us.

We have now completed the preliminary experiments necessary to expose mammalian cell cultures to condensates from cigarettes 28, 837 645 and 772.

The doses for examination in the main experiment were within the range that we have found can be applied for the majority of smoke condensates. The main experiment was carried out on Wednesday (21 July) and it is anticipated that the slides will have been read by early September.

I hope you have a pleasant summer break in the U.K., the weather has been rather wet for the last few weeks.

Best regards,

Yours sincerely,

Dr. E.D. Massey.
