Dear Geoff,

Ames Test

In my letter of October 17/78 which accompanied Mino Bilimoria's short report on the results of the Ames test performed on the three samples of the B-11 series I mentioned that he was conducting the same test on the Zilkey (Agriculture Canada Phase 1) series of cigarettes. This work has now been completed and because of possible interest in having the results available for discussion at the forthcoming Group Research Conference, Mino has prepared another short report covering the data obtained with this series. In due course a formal research report discussing the results obtained from both the B-11 and the Zilkey series will be issued.

Following the suggestion by Dr. Evelyn that because of anomalies in the long term skin painting and promotion tests of the Janus B-11 series the Janus B-9 series might be more appropriate for study by the Ames test, it has been decided to examine the latter series in the near future.

With kind regards.

Yours sincerely,

R.S.W.
