Mr. D.J. Wood,
British American Tobacco Co. Ltd.,
38 Regent's Park Road,
Southampton SO9 1PE,
England.

Dear Jeremy,

I have just re-read your Report No. RD. 1167-R "The Effect of Nitrogen Fertilization on Tobacco and Smoke Composition: Results of Field Experiments", because the contents would appear to be quite relevant to the interests of some of the staff at the Delhi Research Station. I am aware that some aspects of the report must be kept confidential, such as the NMF index; yet much of the report contains information that would be of specific interest to Jim Elliot, the tobacco nutritionist, and Bryan Zilkey who is involved in the Department of Agriculture's Smoking and Health Program. We have always experienced excellent cooperation from these people and as much as possible we try to promote a free exchange of information that is of mutual interest. Would it therefore be asking too much to ask you to consider the possibility of having a modified report prepared which could be given to Messrs Elliot and Zilkey? I am sure they would appreciate it if this could be done.

With best regards,

Yours sincerely,

G.W. Boswall
Research Associate,
Agrology.
